main.c... Output

```cpp
#include <iostream>
using namespace std;

class Payment {
public:
    virtual void pay(int amount) = 0;

};

class UPI : public Payment {
public:
    void pay(int amount) override {
        cout << "UPI Payment: " << amount << endl;
    }
};

class Card : public Payment {
public:
    void pay(int amount) override {
        cout << "Card Payment: " << amount << endl;
    }
};

int main() {
    Payment* p;

    UPI u;
    Card c;

    p = &u;
    p->pay(1000);

    p = &c;
    p->pay(2000);

    return 0;
```
